

# NANOQUEST

## COMBINED CARD READER AND CONTROLLER

The NanoQuest is a secure, single door self-contained access control system. Its compact one-piece design incorporates a proximity card reader with an access controller, suitable for up to 500 users.

The use of a master card for programming precludes the need for an external device. IP65 rated and guaranteed for 5 years against defects and workmanship, the NanoQuest is a reliable and cost-effective product.

In addition to door security, the NanoQuest has the flexibility to provide a secure method of controlling other devices such as intruder alarm panels, lights and heating. It can also be converted to give a Wiegand output to accommodate future integration with a full access control system.

### Key Benefits

- ▶ Up to 500 users
- ▶ Compact and easy to install
- ▶ Simple programming of features
- ▶ Free exit input
- ▶ Arming input
- ▶ Suitable for internal and external use
- ▶ Auxiliary output for controlling intruder alarm panels, lighting & heating etc
- ▶ Alarm/Incident output
- ▶ 26-bit Wiegand output for integration into a larger system

Code	Reader Description
N-QUEST-00	NanoQuest standalone proximity card reader/controller plus 2 Master cards.
NP-CARD-PK-00	Pack of 10 cards for use with NanoQuest.
NP-CARD-PK-01	Pack of 10 cards in filing wallet with duplicate 'administration' cards
NP-CARD-PK-02	Pack of 25 cards in filing wallet with duplicate 'administration' cards
